## PROJECTS

**Chami: Fruit Ripeness Classification App (Thesis)** github.com/Matt-CRL/fruit-ripeness-detector
*A MobileNetV4-Based Ripeness Classification Application for Carabao Mango, Lakatan Banana, and Red Lady Papaya*
- Built a mobile app that classifies fruit ripeness (unripe, ripe, overripe) from an uploaded photo or Live Scan, with a confidence score, using an on-device MobileNetV4 model that works offline.
- Added Grad-CAM heatmaps to show which part of the fruit the model focused on, plus shelf-life and storage guidance for each result.
- Implemented scan history, batches that group scans by fruit type, and local order tracking with customer details and delivery dates.

**StudyBuddy: Student Task and Schedule Planner** studybuddy-petah2.vercel.app
*Web application, deployed on Vercel*
- Built a web app where students add assignments with subject and due date, filter them by pending, late, or done, and search the list.
- Included a weekly class schedule, a study session planner, a home dashboard with deadlines and progress, and a profile page with study statistics and data backup export.
